# 1 TEST STANDARDS

The tests were performed according to following standards:

FCC Part 22 (10-1-12 Edition): PRIVATE LAND MOBILE RADIO SERVICES.

FCC Part 24(10-1-12 Edition): PUBLIC MOBILE SERVICES

FCC Part 27(10-1-12 Edition): MISCELLANEOUS WIRELESS COMMUNICATIONS SERVICES

TIA/EIA 603 D June 2010: Land Mobile FM or PM Communications Equipment Measurement and Performance Standards.

47 CFR FCC Part 15 Subpart B: - Unintentional Radiators

FCC Part 2: FREQUENCY ALLOCA-TIONS AND RADIO TREATY MAT-TERS; GENERAL RULES AND REG-ULATIONS

ANSI C63.4:2009: Methods of Measurement of Radio-Noise Emissions from Low-Voltage Electrical and Electronic Equipment in the Range of 9 kHz to 40 GHz

FCCKDB971168D01 Power Meas License Digital Systems

# 2 SUMMARY

## 2.1 General Remarks

Date of receipt of test sample	:	Oct. 12, 2015
Testing commenced on	:	Oct. 13, 2015
Testing concluded on	:	Nov. 16, 2015

# 2.2 Product Description

# 2.3 Product Description

The **Noblex Argentina S.A.**'s Model: N502 or the "EUT" as referred to in this report; more general information as follows, for more details, refer to the user's manual of the EUT.

Name of EUT	Smart Phone		
Model Number	N502		
	GMSK for GSM/GPRS, 8-PSK for EDGE,QPSK for UMTS, QPSK,		
Modilation Type	16QAM for LTE		
Antenna Type	Internal		
UMTS Operation Frequency Band	Device supported UMTS FDD Band II/V		
	IEEE 802.11b:2412-2462MHz		
)	IEEE 802.11g:2412-2462MHz		
WLAN FCC Operation frequency	IEEE 802.11n HT20:2412-2462MHz		
	IEEE 802.11n HT40:2422-2452MHz		
BT FCC Operation frequency	2402MHz-2480MHz		
HSDPA Release Version	Release 10		
HSUPA Release Version	Release 6		
DC-HSUPA Release Version	Not Supported		
WCDMA Release Version	R99		
LTE Release Version	R8		
UMTS Operation Frequency Band	Device supported FDD band 4, FDD band 7		
	IEEE 802.11b: DSSS(CCK,DQPSK,DBPSK)		
WLAN FCC Modulation Type	IEEE 802.11g: OFDM(64QAM, 16QAM, QPSK, BPSK)		
WLAN FCC Modulation Type	IEEE 802.11n HT20: OFDM (64QAM, 16QAM, QPSK,BPSK)		
	IEEE 802.11n HT40: OFDM (64QAM, 16QAM, QPSK,BPSK)		
BT Modulation Type	GFSK,8DPSK,π/4DQPSK(BT 3.0+EDR)		
Hardware version	E520_WMCK		
Software version	NOBLEX_L500C_V01_20150925		
Android version	Android 4.4.2		
GPS function	Supported		
WLAN	Supported 802.11b/802.11g/802.11n		
Bluetooth	Supported BT 4.0/BT 3.0+EDR		
GSM/EDGE/GPRS	Supported GSM/GPRS/EDGE		
GSM/EDGE/GPRS Power Class	GSM850:Power Class 4/ PCS1900:Power Class 1		
GSM/EDGE/GPRS Operation	GSM850 :824.2MHz-848.8MHz/PCS1900:1850.2MHz-1909.8MHz		
Frequency	GOWIGGO .024.2WII 12-040.0WII 1211 GO 1300.1030.2WII 12-1303.0WII 12		
GSM/EDGE/GPRS Operation	GSM850/PCS1900/GPRS850/GPRS1900/EDGE850/EDGE1900		
Frequency Band			
GSM Release Version	R99		
GPRS/EDGE Multislot Class	GPRS/EDGE: Multi-slot Class 12		
Extreme temp. Tolerance	-30°C to +50°C		
Extreme vol. Limits	3.40VDC to 4.20VDC (nominal: 3.70VDC)		
GPRS operation mode	Class B

## 2.5 Short description of the Equipment under Test (EUT)

## 2.5.1 General Description

N502 is subscriber equipment in the WCDMA/GSM /LTE system. The HSPA/UMTS frequency band is Band II, and Band V, LTE frequency band is.band 4, band 7; The GSM/GPRS/EDGE frequency band includes GSM850 and GSM900 and DCS1800 and PCS1900, but only Band II and Band V and GSM850 and PCS1900 bands test data included in this report. The Mobile Phone implements such functions as RF signal receiving/transmitting, HSPA/UMTS ,LTE and GSM/GPRS/EDGE protocol processing, voice, video MMS service, GPS and WIFI etc. Externally it provides micro SD card interface, earphone port (to provide voice service) and SIM card interface. It also provides Bluetooth module to synchronize data between a PC and the phone, or to use the built-in modem of the phone to access the Internet with a PC, or to exchange data with other Bluetooth devices.

NOTE: Unless otherwise noted in the report, the functional boards installed in the units shall be selected from the below list, but not means all the functional boards listed below shall be installed in one unit.

## 2.6 Internal Identification of AE used during the test

AE ID*	Description
AE1	Battery
AE2	Charger

AF1

Model: S005UA0500100

INPUT: AC100-240V 50/60Hz 150mA

OUTPUT: DC 5.0V 1.0A

\*AE ID: is used to identify the test sample in the lab internally.

#### 2.7 Normal Accessory setting

Fully charged battery was used during the test.

## 2.8 EUT configuration

The following peripheral devices and interface cables were connected during the measurement:

- supplied by the manufacturer
- O supplied by the lab

0	Power Cable	Length (m):	1
		Shield :	1
		Detachable :	1
0	Multimeter	Manufacturer:	1
		Model No.:	1

# 2.9 Related Submittal(s) / Grant (s)

This submittal(s) (test report) is intended for **FCC ID**: **2AEP7N502** filing to comply with FCC Part 22 and Part 24 Rules

### 2.10 Modifications

No modifications were implemented to meet testing criteria.

## 2.11 General Test Conditions/Configurations

#### 2.11.1 Test Modes

NOTE: The test mode(s) are selected according to relevant radio technology specifications.

Test Mode	Test Modes Description	
UMTS/TM1	WCDMA system, QPSK modulation	
UMTS/TM2	HSDPA system, QPSK modulation	
UMTS/TM3	HSUPA system, QPSK modulation	

#### Note:

- 1. This EUT owns two SIM cards, after we perform the pretest for these two SIM cards; we found the SIM 1 is the worst case, so its result is recorded in this report.
- 2. As WCDMA, HSDPA and HSUPA with the same emission designator, test result recorded in this report at the worst case UMTS/TM1 only after exploratory scan.

#### 2.11.2 Test Environment

Environment Parameter	Selected Values During Tests		
Relative Humidity	Ambient		
Temperature	TN	Ambient	
	VL	3.4V	
Voltage	VN	3.7V	
	VH	4.2V	

NOTE: VL=lower extreme test voltage VN=nominal voltage VH=upper extreme test voltage TN=normal temperature

## 3 TEST ENVIRONMENT

## 3.1 Address of the test laboratory

#### **Shenzhen Academy of Metrology and Quality Inspection**

No.4 TongFa Road, Xili TownNanshan District, Shenzhen, China The sites are constructed in conformance with the requirements of ANSI C63.4 (2003) and CISPR Publication 22.

## 3.2 Test Facility

The test facility is recognized, certified, or accredited by the following organizations:

## FCC-Registration information:

#### Shenzhen Academy of Metrology and Quality Inspection

No.4 TongFa Road, Xili TownNanshan District, Shenzhen, China Test Firm FCC Registration number: 806614

#### 3.3 Environmental conditions

During the measurement the environmental conditions were within the listed ranges:

Temperature:	15-35 ° C
Humidity:	30-60 %
Atmospheric pressure:	950-1050mbar

<sup>(1)</sup> expressed at approximately the 95% confidence level using a coverage factor of k=1.96.

## 3.4 Test Description

### 3.4.1 Cellular Band (824-849MHz paired with 869-894MHz)

Test Item	FCC Rule No.	Requirements	Verdict
Effective(Isotropic) Radiated Output Power	§2.1046, §22.913	FCC: ERP ≤ 7W.	Pass
Modulation Characteristics	§2.1047	Digital modulation	N/A
Bandwidth	§2.1049	OBW: No limit. EBW: No limit.	Pass
Band Edges Compliance	§2.1051, §22.917	≤-13dBm/1%*EBW, in 1MHz bands immediately outside and adjacent to The frequency block.	Pass
Spurious Emission at Antenna Terminals	§2.1051, §22.917	FCC: ≤ -13dBm/100kHz, from 9kHz to 10th harmonics but outside authorized operating frequency ranges.	Pass
Field Strength of Spurious Radiation	§2.1053, §22.917	FCC: ≤ -13dBm/100kHz.	Pass
Frequency Stability	§2.1055, §22.355	≤ ±2.5ppm. s "not applicable", the "N/T" de notes "not tested".	Pass

# 3.4.2 PCS Band (1850-1915MHz paired with 1930-1995MHz)

FCC Rule No.	Requirements	Verdict
§2.1046, §24.232	EIRP ≤ 2W	Pass
§2.1046, §24.232	FCC:Limit≤13dB	Pass
§2.1047	Digital modulation	N/A
§2.1049	OBW: No limit. EBW: No limit.	Pass
§2.1051, §24.238	≤ -13dBm/1%*EBW, In 1MHz bands immediately outside and adjacent to The frequency block.	Pass
§2.1051, §24.238	≤-13dBm/1MHz, from 9kHz to10th harmonics but outside authorized Operating frequency ranges.	Pass
§2.1053, §24.238	≤ -13dBm/1MHz.	Pass
§2.1055, §24.235 ne "N/A" denotes	FCC: within authorized frequency block.	Pass
	\$2.1046, \$24.232 \$2.1046, \$24.232 \$2.1047 \$2.1049 \$2.1051, \$24.238 \$2.1051, \$24.238 \$2.1053, \$24.238 \$2.1055,	No.       §2.1046, §24.232       EIRP ≤ 2W         §2.1046, §24.232       FCC:Limit≤13dB         §2.1047       Digital modulation         §2.1049       OBW: No limit. EBW: No limit.         §2.1051, §24.238       ≤ -13dBm/1%*EBW, In 1MHz bands immediately outside and adjacent to The frequency block.         §2.1051, §24.238       ≤-13dBm/1MHz, from 9kHz to10th harmonics but outside authorized Operating frequency ranges.         §2.1053, §24.238       ≤ -13dBm/1MHz.         §2.1055, §24.235       FCC: within authorized frequency block.

Remark:

1. The measurement uncertainty is not included in the test result.

# 3.5 Equipments Used during the Test

# 4 TEST CONDITIONS AND RESULTS

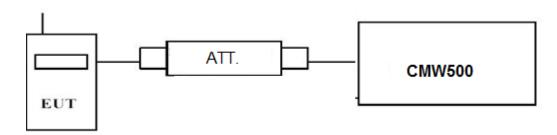

## 4.1 Output Power

### **TEST APPLICABLE**

During the process of testing, the EUT was controlled via R&S Digital Radio Communication tester (CMW500) to ensure max power transmission and proper modulation. This result contains output power and EIRP measurements for the EUT. In all cases, output power is within the specified limits.

### 4.1.1. Conducted Output Power

### **TEST CONFIGURATION**

### **TEST PROCEDURE**

#### **Conducted Power Measurement:**

- a) Place the EUT on a bench and set it in transmitting mode.
- b) Connect a low loss RF cable from the antenna port to a CMW500 by an Att.
- c) EUT Communicate with CMW500 then selects a channel for testing.
- d) Add a correction factor to the display CMW500, and then test.

#### **TEST RESULTS**

Report No.: JTT20151100302

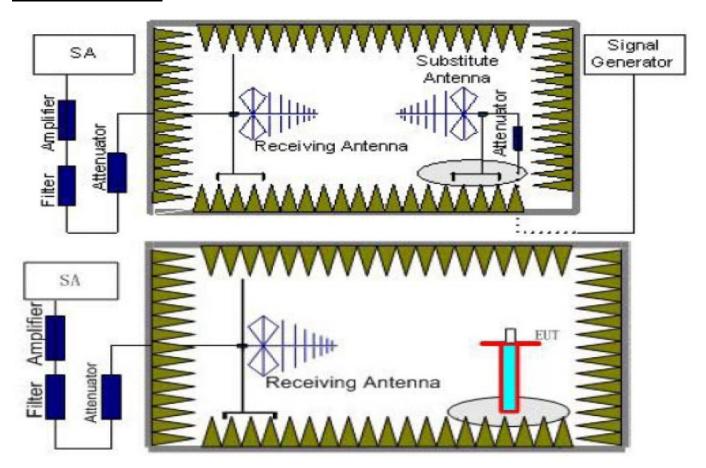

## 4.1.1 Radiated Output Power

#### **TEST DESCRIPTION**

This is the test for the maximum radiated power from the EUT.

Rule Part 24.232(c) specifies, "Mobile/portable stations are limited to 2 watts e.i.r.p. Peak power" and 24.232(e) specifies that "Peak transmit power must be measured over any interval of continuous transmission using instrumentation calibrated in terms of an rms-equivalent voltage." Rule Part 22.913(a) specifies "The ERP of mobile transmitters and auxiliary test transmitters must not exceed 7 Watts."

#### **TEST CONFIGURATION**

## **TEST PROCEDURE**

- 1. EUT was placed on a 1.50 meter high non-conductive stand at a 3 meter test distance from the receive antenna. A receiving antenna was placed on the antenna mast 3 meters from the EUT for emission measurements. The height of receiving antenna is 1.50m. Detected emissions were maximized at each frequency by rotating the EUT through 360° and adjusting the receiving antenna polarization. The radiated emission measurements of all transmit frequencies in three channels (High, Middle, Low) were measured with peak detector.
- 2. A log-periodic antenna or double-ridged waveguide horn antenna shall be substituted in place of the EUT. The log-periodic antenna will be driven by a signal generator and the level will be adjusted till the same power value on the spectrum analyzer or receiver. The level of the spurious emissions can be calculated through the level of the signal generator, cable loss, the gain of the substitution antenna and the reading of the spectrum analyzer or receiver.
- 3. The EUT is then put into continuously transmitting mode at its maximum power level during the test.Set Test Receiver or Spectrum RBW=10MHz,VBW=10MHz, And the maximum value of the receiver should be recorded as (P<sub>r</sub>).
- 4. The EUT shall be replaced by a substitution antenna. In the chamber, an substitution antenna for the frequency band of interest is placed at the reference point of the chamber. An RF Signal source for the frequency band of interest is connected to the substitution antenna with a cable that has been constructed to not interfere with the radiation pattern of the antenna. A power (P<sub>Mea</sub>) is applied to the input of the substitution antenna, and adjust the level of the signal generator output until the value of the receiver

- reach the previously recorded  $(P_r)$ . The power of signal source  $(P_{Mea})$  is recorded. The test should be performed by rotating the test item and adjusting the receiving antenna polarization.
- 5. A amplifier should be connected to the Signal Source output port. And the cable should be connect between the Amplifier and the Substitution Antenna. The cable loss ( $P_{cl}$ ), the Substitution Antenna Gain ( $G_a$ ) and the Amplifier Gain ( $P_{Aq}$ ) should be recorded after test.

The measurement results are obtained as described below:

Power(EIRP)= $P_{Mea}$ -  $P_{Ag}$  -  $P_{cl}$  +  $G_a$ 

We used SMF100A micowave signal generator which signal level can up to 33dBm,so we not used power Amplifier for substituation test; The measurement results are amend as described below:  $Power(EIRP) = P_{Mea} - P_{cl} + G_{a}$ 

- 6. This value is EIRP since the measurement is calibrated using an antenna of known gain (2.15 dBi) and known input power.
- 7. ERP can be calculated from EIRP by subtracting the gain of the dipole, ERP = EIRP-2.15dBi.

#### **TEST LIMIT**

Note: We test the H direction and V direction and V direction is worse.

According to 22.913(a), 24.232(c), the ERP(EIRP) should be not exceeding following table limits:

	Burst Average EIRP
UMTS Band II	33dBm (2W)

	Burst Average ERP
UMTS Band V	38.45dBm (7W)

#### **TEST RESULTS**

#### Remark:

- 1. We were tested all Configuration refer 3GPP TS134 121.
- 2.  $EIRP=P_{Mea}(dBm)-P_{cl}(dB)+P_{Ag}(dB)+G_a(dBi)$
- 3. ERP = EIRP 2.15dBi as EIRP by subtracting the gain of the dipole.

#### UMTS/TM1/UMTS Band II

Frequency (MHz)	P <sub>Mea</sub> (dBm)	Pcl (dB)	Ga Antenna Gain(dB)	PAg (dB)	EIRP (dBm)	Limit (dBm)	Margin (dB)	Polarization

## 4.2 Radiated Spurious Emssion

#### **TEST APPLICABLE**

According to the TIA/EIA 603D:2010 test method, The Receiver or Spectrum was scanned from 9 KHz to the 10<sup>th</sup> harmonic of the highest frequency generated within the equipment, which is the transmitted carrier that can be as high as 1910 MHz The resolution bandwidth is set as outlined in Part 24.238, Part 22.917 and Part 27.54. The spectrum is scanned with the mobile station transmitting at carrier frequencies that pertain to low, mid and high channels of WCDMA Band II and WCDMA Band V.

#### **TEST CONFIGURATION**

## **TEST PROCEDURE**

- 1. EUT was placed on a 1.50 meter high non-conductive stand at a 3 meter test distance from the receive antenna. A receiving antenna was placed on the antenna mast 3 meters from the EUT for emission measurements. The height of receiving antenna is 1.50 m. Detected emissions were maximized at each frequency by rotating the EUT through 360° and adjusting the receiving antenna polarization. The radiated emission measurements of all transmit frequencies in three channels (High, Middle, Low) were measured with peak detector.
- 2. A log-periodic antenna or double-ridged waveguide horn antenna shall be substituted in place of the EUT. The log-periodic antenna will be driven by a signal generator and the level will be adjusted till the same power value on the spectrum analyzer or receiver. The level of the spurious emissions can be calculated through the level of the signal generator, cable loss, the gain of the substitution antenna and the reading of the spectrum analyzer or receiver.

Report No.: JTT20151100302

- 3. The EUT is then put into continuously transmitting mode at its maximum power level during the test.Set Test Receiver or Spectrum RBW=1MHz,VBW=3MHz, And the maximum value of the receiver should be recorded as (P<sub>r</sub>).
- 4. The EUT shall be replaced by a substitution antenna. In the chamber, an substitution antenna for the frequency band of interest is placed at the reference point of the chamber. An RF Signal source for the frequency band of interest is connected to the substitution antenna with a cable that has been constructed to not interfere with the radiation pattern of the antenna. A power (P<sub>Mea</sub>) is applied to the input of the substitution antenna, and adjust the level of the signal generator output until the value of the receiver reach the previously recorded (P<sub>r</sub>). The power of signal source (P<sub>Mea</sub>) is recorded. The test should be performed by rotating the test item and adjusting the receiving antenna polarization.
- 5. A amplifier should be connected to the Signal Source output port. And the cable should be connect between the Amplifier and the Substitution Antenna. The cable loss (P<sub>cl</sub>) ,the Substitution Antenna Gain (G<sub>a</sub>) and the Amplifier Gain (P<sub>Ag</sub>) should be recorded after test. The measurement results are obtained as described below: Power(EIRP)=P<sub>Mea</sub>- P<sub>Ag</sub> P<sub>cl</sub> + G<sub>a</sub>
- 6. This value is EIRP since the measurement is calibrated using an antenna of known gain (2.15 dBi) and known input power.
- ERP can be calculated from EIRP by subtracting the gain of the dipole, ERP = EIRP -2.15dBi.
- 8. In order to make sure test results more clearly, we set frequency range and sweep time for difference frequency range as follows table:

Working Frequency	Subrange (GHz)	RBW	VBW	Sweep time (s)
	0.00009~0.15	1KHz	3KHz	30
	0.00015~0.03	10KHz	30KHz	10
UMTS/TM1/	0.03~1	100KHz	300KHz	10
WCDMA Band V	1~2	1 MHz	3 MHz	2
WCDIVIA Ballu V	2~5	1 MHz	3 MHz	3
	5~8	1 MHz	3 MHz	3
	8~10	1 MHz	3 MHz	3
	0.00009~0.15	1KHz	3KHz	30
	0.00015~0.03	10KHz	30KHz	10
	0.03~1	100KHz	300KHz	10
	1~2	1 MHz	3 MHz	2
UMTS/TM1/	2~5	1 MHz	3 MHz	3
WCDMA Band II	5~8	1 MHz	3 MHz	3
	8~11	1 MHz	3 MHz	3
	11~14	1 MHz	3 MHz	3
	14~18	1 MHz	3 MHz	3
	18~20	1 MHz	3 MHz	2

#### **TEST LIMITS**

According to 24.238, 22.917 specify that the power of any emission outside of the authorized operating frequency ranges must be attenuated below the transmitting power (P) by a factor of at least 43 + 10 log(P) dB.

The specification that emissions shall be attenuated below the transmitter power (P) by at least 43 + 10 log (P) dB, translates in the relevant power range (1 to 0.001 W) to -13 dBm. At 1 W the specified minimum attenuation becomes 43 dB and relative to a 30 dBm (1 W) carrier becomes a limit of -13 dBm. At 0.001 W (0 dBm) the minimum attenuation is 13 dB, which again yields a limit of -13 dBm. In this way a translation of the specification from relative to absolute terms is carried out.

Frequency	Channel	Frequency Range	Verdict
UMTS/TM1/ WCDMA Band V	Low	9KHz-10GHz	PASS
	Middle	9KHz -10GHz	PASS
Ballu V	High	9KHz -10GHz	PASS
UMTS/TM1/ WCDMA	Low	9KHz -20GHz	PASS
Band II	Middle	9KHz -20GHz	PASS
	High	9KHz -20GHz	PASS

## **TEST RESULTS**

### Remark:

- 1. We were tested all Configuration refer 3GPP TS134 121.
- 2.  $EIRP=P_{Mea}(dBm)-P_{cl}(dB)+P_{Ag}(dB)+G_a(dBi)$ 3. ERP=EIRP-2.15dBi as EIRP by subtracting the gain of the dipole.

## 4.3 Occupied Bandwidth and Emission Bandwith

#### **TEST APPLICABLE**

Similar to conducted emissions; occupied bandwidth measurements are only provided for selected frequencies in order to reduce the amount of submitted data. Data were taken at the extreme and mid frequencies of WCDMA Band II and WCDMA band V. The table below lists the measured 99% Bandwidth and -26dBc Bandwidth.

### **TEST CONFIGURATION**

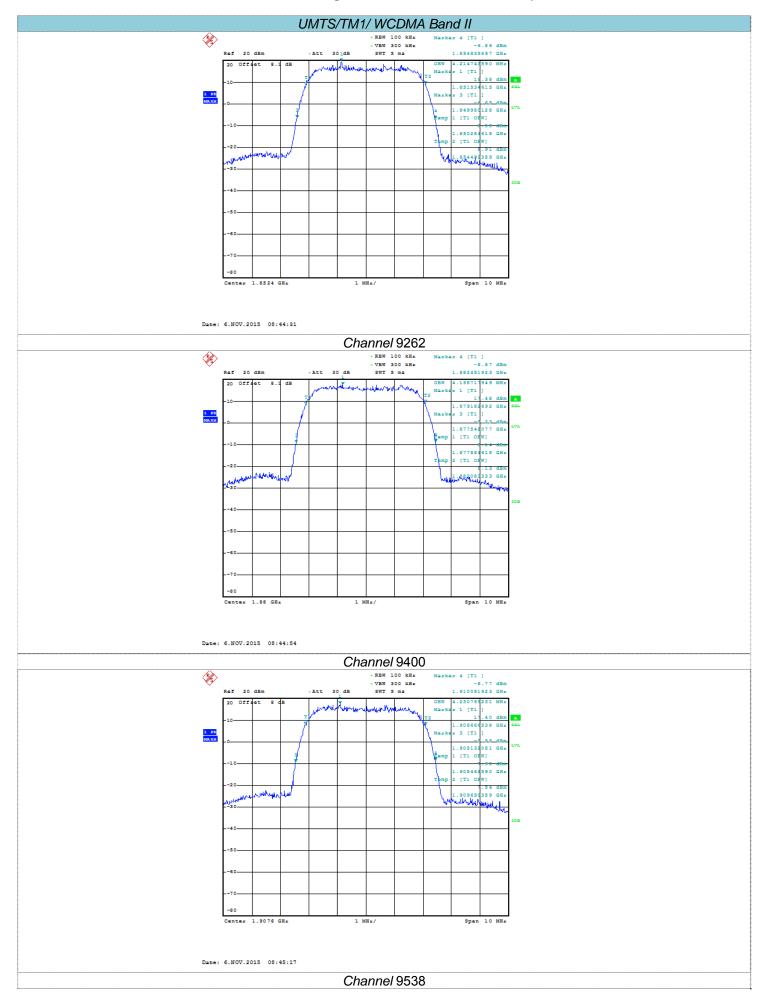

### **TEST PROCEDURE**

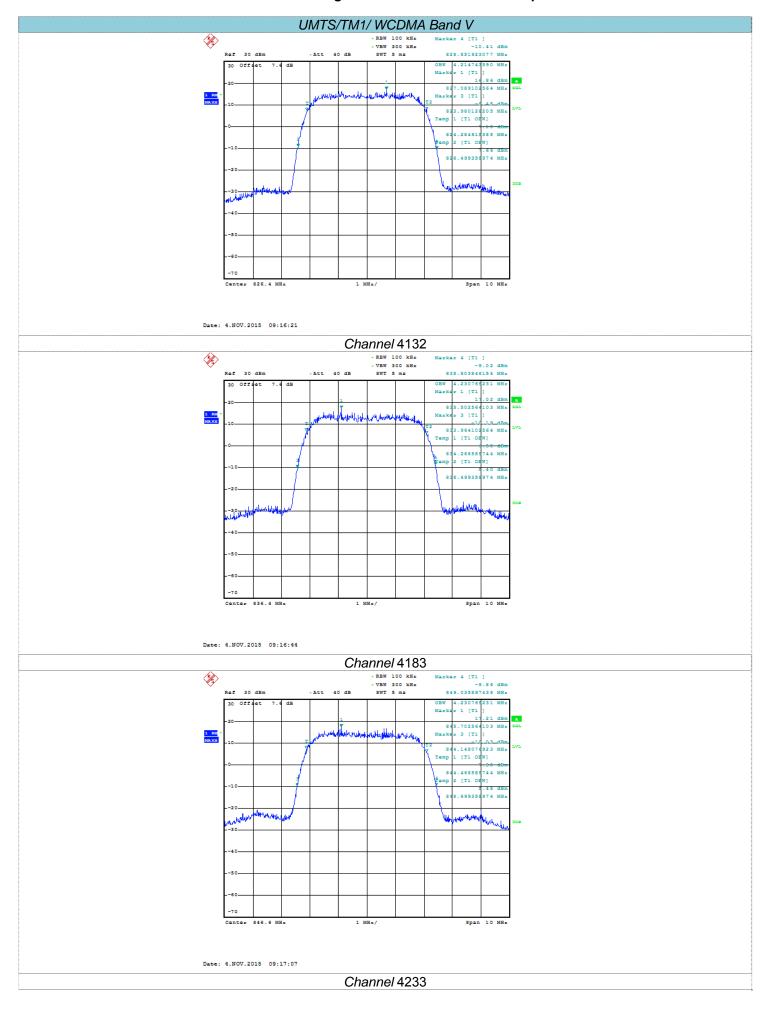

- 1. The EUT was set up for the max output power with pseudo random data modulation;
- 2. The Occupied bandwidth and Emission Bandwidth were measured with Spectrum Analyzer FSQ40;
- 3. Set RBW=100KHz,VBW=30KHz,Span=10MHz,SWT=1.267ms;
- 4. Set SPA Max hold and View, Set 99% Occupied Bandwidth/ Set -26dBc Occupied Bandwidth
- 5. These measurements were done at 3 frequencies for WCDMA band II/V. (low, middle and high of operational frequency range).

### **TEST RESULTS**

	UMTS/TM1/ WCDMA Band II								
Channel Number	(99% BW) (26 dBc BW)								
9262	1852.4	4214.7	4856	PASS					
9400	1880.0	4198.7	4904	PASS					
9538	1907.6	4230.8	4920	PASS					

	UMTS/TM1/ WCDMA Band V								
Channel Number	(99% RW) (26 dBc RW)								
4132	826.40	4214.7	4872	PASS					
4183	836.60	4230.8	4840	PASS					
4233	846.60	4230.8	4888	PASS					

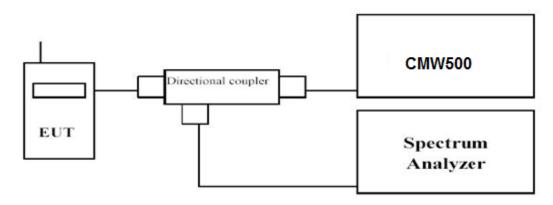

# 4.4 Band Edge Compliance

## **TEST APPLICABLE**

During the process of testing, the EUT was controlled via Aglient Digital Radio Communication tester (8960) to ensure max power transmission and proper modulation.

#### **TEST CONFIGURATION**

### **TEST PROCEDURE**

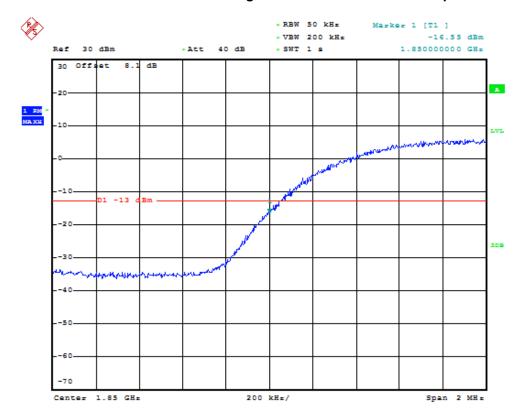

- 1. The EUT was set up for the max output power with pseudo random data modulation;
- 2. The power was measured with Spectrum Analyzer FSQ40;
- 3. Set RBW=51KHz,VBW=200KHz,Span=5MHz,SWT=1ms,Dector: Peak;

These measurements were done at 2 frequencies for WCDMA Band II/V. (low and high of operational frequency range).

## 4.5 Spurious Emssion on Antenna Port

#### **TEST APPLICABLE**

The following steps outline the procedure used to measure the conducted emissions from the EUT.

- 1. Determine frequency range for measurements: From CFR 2.1057 the spectrum should be investigated from the lowest radio frequency generated in the equipment up to at least the 10th harmonic of the carrier frequency. For the equipment of WCDMA band II/IV, this equates to a frequency range of 9 KHz to 20GHz, data taken from 9 KHz to 20 GHz.For WCDMA Band V, data taken from 9 KHz to 13.6 GHz.
- 2. The sweep time is set automatically by instrument itself. That should be the optimal sweep time for the span and the RBW. If the sweep time is too short, that is sweep is too fast, the sweep result is not accurate; if the sweep time is too long, that is sweep is too low, some frequency components may be lost. The instrument will give an optimal sweep time according the selected span and RBW.
- The procedure to get the conducted spurious emission is as follows:
   The trace mode is set to MaxHold to get the highest signal at each frequency;
   Wait 25 seconds;
   Get the result.
- 4. Determine EUT transmit frequencies: below outlines the band edge frequencies pertinent to conducted emissions testing.

#### **TEST CONFIGURATION**

#### **TEST PROCEDURE**

- 1. The EUT was set up for the max output power with pseudo random data modulation;
- 2. The power was measured with Spectrum Analyzer FSQ40;
- 3. These measurements were done at 3 frequencies for WCDMA band II/IV/V. (low, middle and high of operational frequency range).

#### **TEST LIMIT**

Part 24.238, Part 22.917 and Part 22.54 specify that the power of any emission outside of the authorized operating frequency ranges must be attenuated below the transmitting power (P) by a factor of at least 43 + 10 log(P) dB.

The specification that emissions shall be attenuated below the transmitter power (P) by at least 43 + 10 log (P) dB, translates in the relevant power range (1 to 0.001 W) to -13 dBm. At 1 W the specified minimum attenuation becomes 43 dB and relative to a 30 dBm (1 W) carrier becomes a limit of -13 dBm. At 0.001 W (0 dBm) the minimum attenuation is 13 dB, which again yields a limit of -13 dBm. In this way a translation of the specification from relative to absolute terms is carried out.

## 4.6 Frequency Stability Test

#### **TEST APPLICABLE**

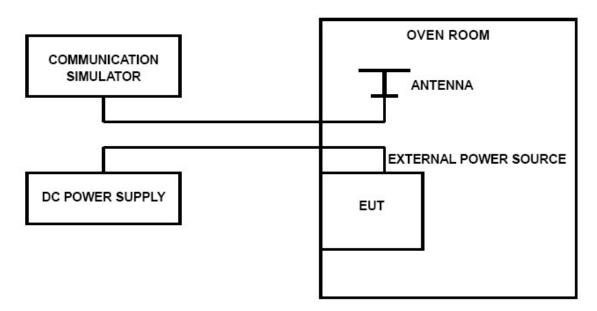

- 1. According to FCC Part 2 Section 2.1055 (a)(1), the frequency stability shall be measured with variation of ambient temperature from -30 ℃ to +50 ℃ centigrade.
- 2. According to FCC Part 2 Section 2.1055 (E) (2), for battery powered equipment, the frequency stability shall be measured with reducing primary supply voltage to the battery operating end point, which is specified by the manufacture.
- 3. Vary primary supply voltage from 85 to 115 percent of the nominal value for other than hand carried voltage equipment and the end voltage point was 3.40V.

### **TEST PROCEDURE**

In order to measure the carrier frequency under the condition of AFC lock, it is necessary to make measurements with the EUT in a "call mode". This is accomplished with the use of R&S CMW500 DIGITAL RADIO COMMUNICATION TESTER.

- 1. Measure the carrier frequency at room temperature;
- Subject the EUT to overnight soak at -30°C;
- 3. With the EUT, powered via nominal voltage, connected to the CMW500 and in a simulated call on middle channel of WCDMA Band II/IV/V, measure the carrier frequency. These measurements should be made within 2 minutes of Powering up the EUT, to prevent significant self-warming;
- 4. Repeat the above measurements at 10°C increments from -30°C to +50°C. Allow at least 0.5 hours at each temperature, unpowered, before making measurements;
- 5. Remeasure carrier frequency at room temperature with nominal voltage. Vary supply voltage from minimum voltage to maximum voltage, in 0.1Volt increments remeasuring carrier frequency at each voltage. Pause at nominal voltage for 0.5 hours unpowered, to allow any self-heating to stabilize, before continuing;
- 6. Subject the EUT to overnight soak at +50°C;
- 7. With the EUT, powered via nominal voltage, connected to the CMW500 and in a simulated call on the centre channel, measure the carrier frequency. These measurements should be made within 2 minutes of Powering up the EUT, to prevent significant self-warming;
- 8. Repeat the above measurements at 10℃ increments from +50℃ to -30℃. Allow at least 0.5 hours at each temperature, unpowered, before making measurements;
- 9. At all temperature levels hold the temperature to +/- 0.5°C during the measurement procedure;

## **TEST CONFIGURATION**

#### **TEST LIMITS**

#### For Hand carried battery powered equipment

According to the JTC standard the frequency stability of the carrier shall be accurate to within 0.1 ppm of the received frequency from the base station. This accuracy is sufficient to meet Sec. 24.235, Frequency Stability. The frequency stability shall be sufficient to ensure that the fundamental emission stays within the authorized frequency block. As this transceiver is considered "Hand carried, battery powered equipment" Section

2.1055(d)(2) applies. This requires that the lower voltage for frequency stability testing be specified by the manufacturer. This transceiver is specified to operate with an input voltage of between 3.40VDC and 4.20VDC, with a nominal voltage of 3.70DC. Operation above or below these voltage limits is prohibited by transceiver software in order to prevent improper operation as well as to protect components from overstress. These voltages represent a tolerance of -10 % and +12.5 %. For the purposes of measuring frequency stability these voltage limits are to be used.

Report No.: JTT20151100302

#### For equipment powered by primary supply voltage

According to the JTC standard the frequency stability of the carrier shall be accurate to within 0.1 ppm of the received frequency from the base station. This accuracy is sufficient to meet Sec. 24.235, Frequency Stability. The frequency stability shall be sufficient to ensure that the fundamental emission stays within the authorized frequency block. For this EUT section 2.1055(d)(1) applies. This requires varying primary supply voltage from 85 to 115 percent of the nominal value for other than hand carried battery equipment.

#### **TEST RESULTS**

	UMTS/TM1/WCDMA Band II								
DC Power	Temperature (°C)	Frequency error(Hz)	Frequency error(ppm)	Limit (ppm)	Verdict				
3.40	20	48	0.03	2.50	PASS				
3.70	20	55	0.03	2.50	PASS				
4.20	20	68	0.04	2.50	PASS				
3.70	-30	57	0.03	2.50	PASS				
3.70	-20	49	0.03	2.50	PASS				
3.70	-10	58	0.03	2.50	PASS				
3.70	0	62	0.03	2.50	PASS				
3.70	10	54	0.03	2.50	PASS				
3.70	20	38	0.02	2.50	PASS				
3.70	30	47	0.03	2.50	PASS				
3.70	40	29	0.02	2.50	PASS				
3.70	50	38	0.02	2.50	PASS				

	UMTS/TM1/WCDMA Band V								
DC Power	Temperature (°C)	Frequency error(Hz)	Frequency error(ppm)	Limit (ppm)	Verdict				
3.40	20	60	0.07	2.50	PASS				
3.70	20	59	0.07	2.50	PASS				
4.20	20	48	0.06	2.50	PASS				
3.70	-30	55	0.07	2.50	PASS

3.70	-10	48	0.06	2.50	PASS				
3.70	0	46	0.05	2.50	PASS				
3.70	10	52	0.06	2.50	PASS				
3.70	20	61	0.07	2.50	PASS				
3.70	30	58	0.07	2.50	PASS				
3.70	40	49	0.06	2.50	PASS				
3.70	50	56	0.07	2.50	PASS				

## 4.7 Peak-to-Average Ratio (PAR)

### **LIMIT**

The Peak-to-Average Ratio (PAR) of the transmission may not exceed 13 dB.

## **TEST CONFIGURATION**

### **TEST PROCEDURE**

Use spectrum to measure the total peak power and record as  $P_{Pk}$ . Use spectrum to measure the total average power and record as  $P_{Avg}$ . Both the peak and average power levels must be expressed in the same logarithmic units (e.g., dBm).

Determine the PAPR from:

 $PAPR (dB) = P_{Pk} (dBm) - P_{Avg} (dBm).$ 

## **TEST RESULTS**

UMTS/TM1/ WCDMA Band II			
Channel	Frequency	Measured	
Number	(MHz)	(dB)	
9262	1852.4	3.24	
9400	1880.0	3.27	
9538	1907.6	3.22
